The Shelf Stability of Nazdar product can be determined by the following methods:

1. Some Nazdar products include an expiration date on the product’s label. Use this reference rather than the lot number.

2. If expiration date is not included, use the lot number of the Nazdar product to determine manufacture date, then reference the Shelf Life Stability Chart to verify your product’s shelf life.

   - **If the lot number is 8 digits**: The year of manufacture is the 2nd digit + 10; the month is the 3rd and 4th digits.
     - Example: Lot #64074895: 4 = Manufactured in 2014, 07 = July
   
   - **If the lot number is 10 digits**: The year of manufacture is the 1st and 2nd digits; the month is the 3rd and 4th digits.
     - Example: Lot #1610211234: 16 = Manufactured in 2016, 10 = October

NOTE: Proper storage is key to achieving maximum shelf stability. Shelf stability refers to unopened containers stored in temperatures not to exceed 78° F (25 °C). Specials in any Nazdar ink series may have a shorter shelf life than standard products. Please refer to your product’s Technical Data Sheet for complete information.
