

ADE Epoxy Screen Ink has been formulated with high quality epoxy resins for excellent adhesion to metals, glass and a wide range of hard-to-print substrates. ADE Series is ideal for electronic and industrial applications and provides outstanding solvent, chemical and abrasion resistance.

ADE is a two-part ink and must be initiated with a catalyst prior to use. ADE ink exhibits a high gloss finish.

ADE Series is for indoor applications only.

**SUBSTRATES** Epoxy, melamine, treated polyethylene, treated polypropylene, metals, glass, PC boards

## USER INFORMATION

*While technical information and advice on the use of this product is provided in good faith, the User bears sole responsibility for selecting the appropriate product for their end-use requirements. See full disclaimer at the end of the document.*

**MESH** 200-305 threads per inch (78-120 threads per centimeter) monofilament polyester mesh or stainless steel mesh for most applications

**STENCIL** Solvent resistant direct emulsions and capillary films

**SQUEEGEE** 70-80 durometer polyurethane squeegee

**COVERAGE** 1200-1800 square feet (111-167 square meters) per gallon depending upon ink deposit

**PRINTING** *Ink Preparation:* Add 1 part ADE677 Catalyst to 5 parts ADE ink by weight. Allow the catalyzed ink mixture to stand for a period of about 30 to 45 minutes. This time lag, referred to as the “induction period,” is necessary to allow the catalyst to become uniformly mixed and available for the polymerization (cross linking) process. Pot life of the catalyzed ADE ink is approximately 6 to 8 hours.

Add only enough ink to the screen to be able to print for 5-10 minutes. Add additional ink in small increments throughout the print run to maintain screen stability. Thoroughly mix the inks prior to printing.

Maintain ink temperature at 65°-90°F (18°-32°C) for optimum print drying performance. Lower temperatures increase the ink viscosity, impairing both flow and drying. Elevated temperatures lower the ink viscosity, reducing print definition, film thickness and opacity.

Pretest to determine optimum printing performance for a particular set of ink, substrate, screen, press, and drying variables/conditions.

### DRYING/ CURING

ADE Series dries to touch by solvent evaporation in approximately 30-60 minutes at room temperature or force-dry for 3-5 minutes at temperatures of 150°-180°F (66°-83°C). Room temperature drying may take 5-7 days or more for complete cure. Good air circulation is necessary to remove the vaporized solvents. Multiple layers of ink may require longer drying times than a single layer.

Most ADE printed colors may be baked for 10 minutes at 300° - 325°F (150° - 164°C).

Exceptions: ADE10 Primrose Yellow, ADE11 Lemon Yellow, ADE12 Medium Yellow ADE20 Brilliant Orange, ADE80 Process Yellow, ADE361 Yellow and ADE456 Process Blue. These colors may be baked at 150° - 250°F (66° - 121°C) for 10 minutes.

Note: Pigments used in these colors are not stable at temperatures above 250°F (121°C). Baking these colors above the recommended temperatures will result in color change, bleeding and/or discoloration. Overprinting these colors with other colors which can take higher temperatures (such as white), and baking at higher temperature is not recommended.

Baking ADE prints will produce the hardest, most durable finish.

Baking ADE inks at temperatures over 325°F (164°C) may result in discoloration and/or yellowing.

### CLEAR / VARNISHES

Mixing Clear / Metallic Mixing Clear: Use ADE26 Mixing/Metallic Clear to reduce the density of colors or as a clear base for specialty additives such as metallic powders.

Heavy Body Base: ADE90 Heavy Body Base may be added to ADE inks when printing halftones and fine details.

### ADDITIVES

All additives should be thoroughly mixed into the ink before each use. Prior to production, test any additive adjustment to the ink.

Reducer: Use RE190 Thinner or RE189 Slow Thinner to reduce the viscosity of these inks for best printing results. Add up to 15% by weight.

Retarder: To prevent drying in the screen during hot humid conditions, add RE182 Retarder sparingly.

Catalyst: ADE677 Catalyst, add 1 part catalyst to 5 parts ink by weight. Ink mixed with ADE677 has a 6 to 8 hour pot life.

ADE176 Catalyst (formerly ER176 Catalyst) may be added to ADE inks at a ratio of 1 part catalyst to 4 parts ink by weight. Ink mixed with ADE176 has a pot life of 6 to 8 hours. ADE176 is only available with a minimum of 200 liters per order.

Glass Catalyst: For printing on glass, ADE678 Glass Catalyst may be added to the ADE inks using 1 part ADE678 to 5 parts ADE ink. Allow for the "induction period" as described above. Prints may be air dried but will require 7-10 days for full cure and maximum adhesion, chemical and water resistance. Ink mixed with ADE678 has a pot life of 6 to 8 hours.

ADE678 is the recommended catalyst to use with metallic pigments.

Snow Board Catalyst: For printing on polyethylene materials used in the lamination and manufacture of snow skis and snowboards, the ADE679 Snowboard Catalyst may be mixed into the ADE inks. Use 1 part ADE679 to 5 parts ADE ink. Allow for the "induction period" as described above. Prints may be air dried or force air dried at lower temperatures which do not affect the snowboard material. Prints should be racked and allowed to chemically react at least 4 days before laminating. Ink mixed with ADE679 has a pot life of 6 to 8 hours.

Flow Control: CARE8 Flow Control Agent may be added from ½% to 1% by weight to the ADE inks.

### CLEAN UP

Screen Wash (Prior to Reclaim): Use IMS201 Premium Graphic Screen Wash.

Press Wash (On Press): Use IMS301 Premium Graphic Press Wash.

### STORAGE

Store tightly covered at temperatures between 65°-90°F (18°-32°C). Ink taken from the press should not be returned to the original container; store separately to avoid contaminating unused ink.

## GENERAL INFORMATION

### INK HANDLING

All personnel mixing and handling these products must wear gloves and eye protection. Clean up spills immediately. If ink does come in contact with skin, wipe ink off with a clean, dry, absorbent cloth (do not use solvent or thinner). Wash the affected area with soap and water. Consult the ADE Series Material Safety Data Sheet for further instructions and warnings.

### ADHESION TESTING

1. Touch of ink surface – the ink will be smooth and slick.
2. Thumb twist – the ink surface will not mar or smudge.
3. Scratch surface – the ink will resist scratching.
4. Cross hatch tape test – use a cross hatch tool or a sharp knife to cut through ink film only; then apply 3M #600 clear tape on cut area, rub down, wait for 1 minute and rip off at a 180 degree angle. Ink should only come off in actual cut areas.

## PRODUCT OFFERING

### STANDARD PRINTING COLORS

The Standard Printing Colors have excellent opacity.

### PANTONE MATCHING SYSTEM® BASE COLORS

The Pantone Matching System® Base Colors are used to simulate the Pantone® Color Formulation Guide. These inks can be used in matches to achieve Pantone® color simulations, or let down with mixing clear. The ColorStar® Color Management System software uses Pantone Matching System® Base Colors. These color formulations are also available at [www.nazdar.com](http://www.nazdar.com).

### MIXING COLORS

The Mixing Colors may be used in color matching.

### HALOGEN-FREE COLORS

The halogen-free colors are press ready and may also be used to match special colors. These colors are free of the halogens Chlorine and Bromine based on supplier information and in compliance with the electronics industry standard, IEC 61249-2-21 (<http://www.iec.ch/>).

### SPECIAL ADDITIVES

When inks are to be printed over a special effect color, the overprinting ink(s) must be evaluated for intercoat adhesion before proceeding with the production run. To maximize intercoat adhesion, specialty colors should be printed as late as possible in the print sequence.

The following special effect pigments may be added to the ADE inks. These pigments are available in 1-pound containers. Contact Nazdar for the item number(s) and availability of each special effect product. Pigments may settle in the container; prior to printing, thoroughly mix the ink.

Silver (aluminum) Metallic: add up to 8% by weight.

Gold (bronze) Metallic: add up to 15% by weight.

Mix only enough metallic ink to be used the same day. Chemical reactions in metallic inks may result in viscosity, color and printability changes over time.

Pearlescents / Interference Pigments: add up to 20% by weight.

Multi-Chromatic Pigments: add up to 10% by weight.

See the Pearlescent, Interference, and Multi-Chromatic Technical Data Sheets for more information.

Phosphorescents: add up to 20% by weight.

Fluorescents: add up to 25% by weight. Fluorescent colors fade quickly with exposure to ultraviolet light

### COLOR CARD MATERIALS

The following is a list of screen printed samples available.

Conventional Color Card: shows the Standard Printing Colors, Pantone Matching System® Base Colors and some Mixing Colors.

Halogen-Free Color Presenter: shows all the halogen-free colors.

Special Effects Color Card: shows Metallic, Pearlescent, Interference, and Multi-Chromatic effects mixed with clear

## PHYSICAL PROPERTIES TEST RESULTS

Property	Test	Result
Adhesion	Cross-hatch tape (ASTM D3359)	Pass
Gloss	60° meter >90	Pass
Pencil Hardness	Gardco/Wolff Wilborn Pencil Hardness Tester	Pass H2 (air dried sample) Pass H3 (baked sample)
Impact Resistance	Gardner Impact Tester, 1.2 cm (0.5 inches) diameter, 75 cm 454 grams (30 inch-pounds)	Pass
Heat Resistance	72 hours at 182°C (360°F)	Pass; gloss decreased from 90 to 68 at 60°
Chemical Resistance	MEK (methyl ethyl ketone), xylene, isopropyl alcohol, mineral spirits 100 double rubs	Pass
Water Immersion	20 minutes (air dried sample) 50 minutes (baked sample)	Pass
Abrasion Resistance	Taber Abraser CS10 wheels, 500 grams 600 cycles (air dried sample) 300 cycles (baked sample)	Pass

These results were obtained by laboratory testing of ADE52 Opaque Black ink on anodized aluminum. This information is provided as a general indication of the ink performance, not as a specification or a guarantee.

ADE52 Opaque Black with 10% by weight RE190 Thinner and 20% by weight ADE677 Catalyst was printed on anodized aluminum using 65 threads per centimeter (195 threads per inch) plain weave mesh. A set of prints was dried at room temperature for 14 days; another set was baked for 5 minutes at 77°C (170°F) then allowed to cross link for 14 days.

**PACKAGING** All items listed below are available in kilogram and/or gallon containers.

Stock Number	Standard Printing Colors	Stock Number	Pantone Matching System® Base Colors (4-gallon minimum)
* ADE10	Primrose Yellow	ADE358	Tinting White
* ADE11	Lemon Yellow (gallons only)	ADE359	Tinting Black
* ADE12	Medium Yellow	ADE360	Orange
ADE15	Yellow (GS)	* ADE361	Yellow
ADE16	Yellow (RS)	ADE362	Warm Red
ADE19	Fire Red	ADE363	Rubine Red
* ADE20	Brilliant Orange	ADE364	Rhodamine Red
ADE22	Ultra Blue (gallons only)	ADE365	Purple
ADE26	Mixing/Metallic Clear	ADE366	Violet
ADE52	Opaque Black	ADE367	Reflex Blue
ADE62	Warm Red	ADE368	Process Blue
ADE67	Reflex Blue	ADE369	Green
ADE75	Opaque White		
ADE78	High Intensity White		
ADE114	Brown		
ADE172	Flat Clear		
Stock Number	Mixing Colors	Stock Number	Halogen-Free Colors (4-gallon minimum)
* ADE80	Process Yellow	ADE200	Halogen-Free Mixing Clear
ADE82	Carmine	ADE201	Halogen-Free Tinting Black
ADE83	Magenta	ADE202	Halogen-Free Tinting White
ADE85	Green	ADE205	Halogen-Free Super Opaque Black
ADE86	Blue (GS)	ADE206	Halogen-Free Super Opaque White
ADE87	Blue (RS)	ADE210	Halogen-Free Yellow
ADE88	Violet	ADE211	Halogen-Free Orange
ADE89	Red Toner	ADE212	Halogen-Free Red
ADE90	Heavy Body Base	ADE213	Halogen-Free Carmine
* ADE456	HT Process Blue	ADE214	Halogen-Free Magenta
ADE586	Permanent Process Red	ADE215	Halogen-Free Maroon
		ADE216	Halogen-Free Violet
		ADE217	Halogen-Free Blue RS
		ADE218	Halogen-Free Blue GS
		ADE219	Halogen-Free Green

\*These colors are not recommended for baking temperatures over 250°F (121°C).

### PACKAGING

Additives/Reducers are available in quart, liter and/or gallon containers.  
Cleaners are available in 1-gallon, 5-gallon and 55-gallon containers.

Stock Number	Additives/Reducers	Stock Number	Clean Up
ADE677	Catalyst (quarts or liters only)	IMS201	Premium Graphic Screen Wash
ADE678	Glass Catalyst (quarts or liters only)	IMS301	Premium Graphic Press Wash
ADE679	Snowboard Catalyst (quarts or liters only)		
CARE8	Flow Control Agent		
RE182	Retarder		
RE189	Slow Thinner		
RE190	Thinner		
ADE176	Catalyst (formerly ER176, 200 liters minimum per order)
