

Product Code: DPMAF

Water-Resistant Artist Fabric

Nazdar's Water-Resistant Artist Fabric is a 20-mil material with a coating designed for thermal and piezo ink jet printer platforms as well as dye, pigment & eco/solvent ink sets. It's the perfect solution for creating cost-effective banners with a unique look and feel. This material also has good backlit characteristics.

Applications: Indoor Banners, Signs & Posters. POP/POS Displays, Flags, Window Graphics, Textiles. Interior Design work, Draperies, & Table Drapes.

Property	Specifications																
Material	Polypropylene																
Gauge	20 mil																
Weight	150 g/m ²																
Color	L* >90, a* =1.5 ± 2.0, b* = -4.0 ± 2.0																
Whiteness	>110																
Opacity	>80%																
Printer Ink/Compatibility	Encad, ColorSpan, Hewlett-Packard, Mimaki, Roland & Epson Series dye, pigment, and eco-solvent inks.																
Software Settings	The heavyweight coated setting in most RIPs is appropriate, although it's recommended that you try a few different settings to achieve optimum performance for your specific application. The coating on this product is engineered for 300% ink coverage.																
Color Matching	For the best and most consistent results, a profile should be created using an external color calibrator in conjunction with your RIP and color matching software.																
Light Fastness	All dye-based inks fade noticeably under direct sunlight and in interior applications where direct sunlight may fall on the image and/or where fluorescent or other UV producing lighting is present. Certain UV enhanced inks, pigment-based inks and certain UV inhibiting laminates will extend the time duration of the fading process inherent with all ink jet inks. The fading time of ink jet ink is a direct result of the inks that you choose to use and the environment where the print is displayed.																
Finishing/Post Processing	No post processing or finishing is required on this product, although a clear fixative may be applied to enhance certain areas of the print.																
Optimal Service Environment	For printing: 68-77° F, 50% Relative Humidity. For end use: 0-300° F																
Handling Recommendations	Artist Rolls fabric are supplied with the coated side facing out. Due to the absorptive nature of the coating, you should avoid touching the coated surface of the media. It's always recommended that cotton gloves be used when handling ink jet coated materials.																
Ideal Storage Conditions	40°-70°F, 50% R.H. (a controlled environment is recommended); store in original packaging.																
Shelf Life	1 year when stored in proper conditions.
